She is an ad admunct professor at the University of Waterloo, a member of the Institute of Physics of Glyph-Waterloo, and a partner of the Peripheral Institute of Theoretical Physics. She is a theoretical physicist who has made an important contribution in the fields of non-linear dynamics, quantum information and quantum optics. Shohini taught physics and astronomy to more than 2,000 students enrolled in her courses, and developed innovative online teaching and learning tools for science. Her research and teaching won her numerous awards, including the WOW (Women of Waterloo) Award for Education and a prestigious tribute to TED. Shohini is also passionate about addressing gender issues in science and recently founded the Laurier Center for Women in Science (Wins). Apart from physics she likes to read, travel, and cricket (the game, not the insect). Vesna Milosevic-Zedger, a former astrophysicist from the National Observatory in Belgrade, Serbia, joined the physics department of the University of Winnipeg in 2000. In Canada, she earned a degree in science education, and made an important contribution in teaching science courses to non-science and life sciences students, creating community awareness by initiating science assistance programs. Along with two colleagues, she created a concept course in science that became the preferred choice for a science course for education and art students at the University of Winnipeg, with registration increasing tenfold. Vesna's passion for science education led to numerous presentations at conferences and symposia for university instructors and science teachers. She teaches a wide range of courses including astronomy, concepts in science, physics for life sciences and music physics. L. Arthur (Art) Read, PhD, is professor emeritus at Wilfrid Laurier University (WLU), Waterloo. He received a bachelor's degree and master's degree in physics from McMaster University, and a Ph.D. (physics) from the University of Waterloo. At WLU, she taught art physics and served in various managerial positions, including Dean of Arts and Sciences (1983-1999) and director of the Brentford Development Project, and was later appointed first dean of the Lorier Brentford Campus (1999-2001). With a keen interest in the quality of education and development standards, he also served as a curriculum appraisal for the Ontario High School Education Quality Assessment Board. His research interests included microwave optics and broadband molecular spectroscopy. He developed and taught a variety of physics courses, including musical acoustics, analog electronics, life sciences physics and introductory astronomy. In his retirement, Art currently teaches two popular online astronomy courses for Laurier and recently completed the development of interactive online astronomy courses for provincial use in Ontario.
